

What if we are creating scientific laws to explain a mystery that cannot be explained? What if there is only one constant in the universe, and we can't see it?

Those who believe everything can be answered with man-made formulas and theories are confronted with a dilemma—there is no scientific theory to explain how and why the V4641 Singularity is affecting Earth. A microquasar at the center of our galaxy, V4641 has begun to affect planet Earth and the rest of our solar system in inexplicable ways. In trying to determine how such a thing could happen, Danny Adamson, a physicist turned science editor for N.H.Q. Broadcast Services, has discovered not only an inconceivable connection between Earth and V4641 but also a critical miscalculation in the understanding of the creation of the universe. This error when corrected suggests that our planet's stability and the longevity of the human race may be grossly overestimated. Danny and all inhabitants of Earth must quickly learn what options they have to prevent total destruction of the planet.

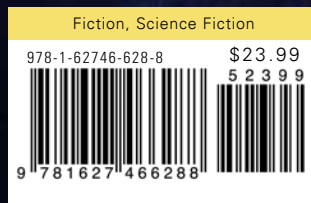

In this thrilling novel Mark Cornelius broaches the topic of end times and vividly shows what the human race would do if unable to deny the coming of the last days. Danny's growing faith in the face of certain catastrophe and his observations about science and intelligent design make this a compelling read for both the doubtful and those who believe. The true scientific theories portrayed in *The Singularity* allow you to peer into a not so distant future that is far different than any of us has considered. Danny will help others see a possibility contrary to common thought. What if God is in control of the universe and has a plan in which humans play a crucial role. *The Singularity* will keep you engaged with its tight plot and fast pace.

MARK CORNELIUS graduated from the University of North Texas with degrees in psychology and vocational rehabilitation. He has had a successful career as an executive recruiter, business development consultant, and wealth management specialist in Nashville, Tennessee. Mark's published works include *RUT Management-Discovering Adventure in the Routine of Life*, *Believement: Breaking through the Belief Barrier*, *The Believement Companion: A Study Guide for Breaking through the Belief Barrier*, and *Thunder Buffalo*.
